

Foundational Content- Learning Map

Goal:

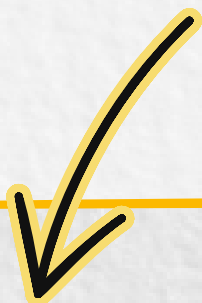

Build conceptual clarity around Agentic AI so you can confidently design, reason about, and work with AI-driven workflows — without needing to code.

Overview...

Applied Agentic AI - Foundational Material - 2026

This foundational content is designed to support learners in building conceptual clarity around Agentic AI. It helps learners understand how GenAI works, how prompts and text shape model behavior, and how agent-based workflows operate—without requiring any programming knowledge.

These resources are not mandatory before Class 1. All foundational resources are optional and can be explored at your own pace during the course. We also encourage learners to attempt the AI exercise released after Week 1, which will be discussed and walked through together in subsequent sessions.

Resources:

Evolution of GenAI
Basics of Prompt Engineering
Basics of Text Processing
Python Foundations
- Python Fundamentals crash course
- Python for GenAI

Exercise:

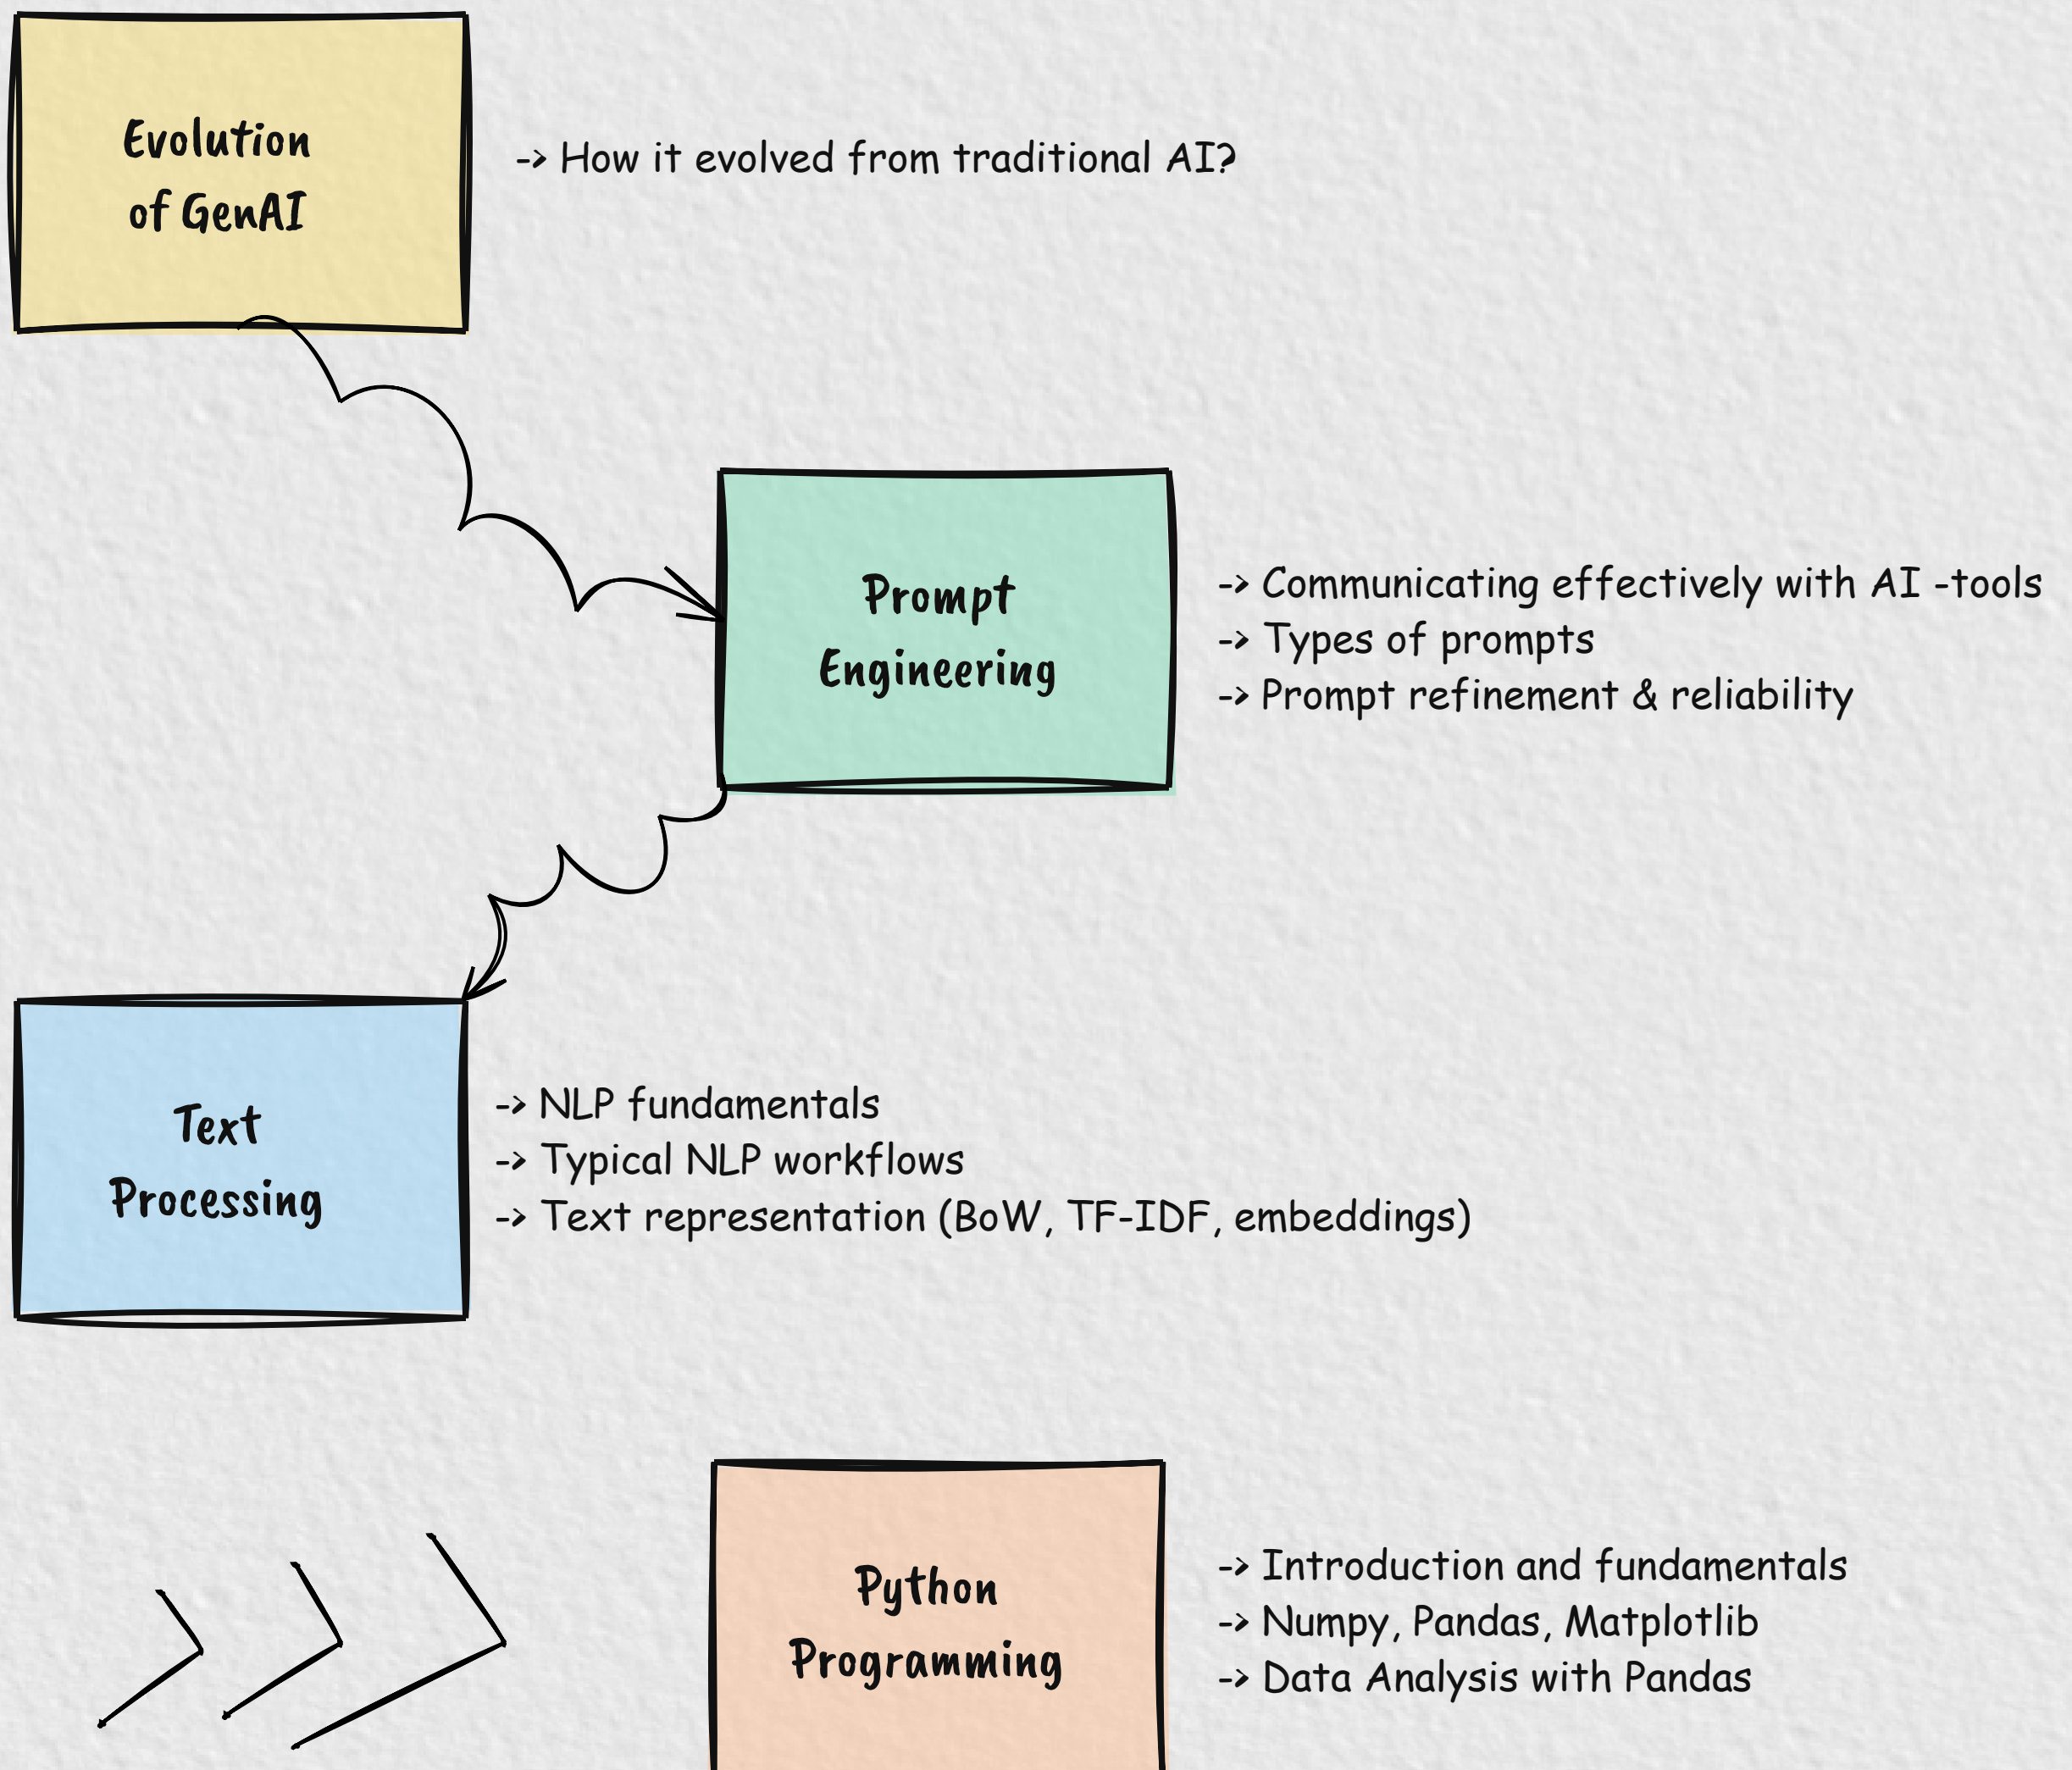

BankCo — Retaining Premium Credit Card Customers with an Internal Agent

Note:

All foundational resources are optional and meant for conceptual clarity only. Learners can go through during the course. Python is not required for this course. The core program focuses on agent design, workflows, and hands-on Agentic AI systems.

Overview

**Week 0
Exercise**

**BankCo — Retaining Premium Credit Card
Customers with an Internal Agent**

For more details on the topics covered in each resource, please refer to the detailed Foundational Material Learner Guide on your Uplevel account.
