Hey learners, Hope you're doing well!

Ahead of our Week 1 live session, please complete the mandatory setup so you can follow along without any blockers.

◆ **Mandatory Setup (Required before class)** Please complete the Week 1 setup using the document on Uplevel or the setup email you received, and ensure you are ready before the class.

📖 **Pre-class resources (Optional | recommended)** If you have **30–60 minutes**, review these to get more from the session:

1. **Prompting** (clear instructions, constraints, structured output)
2. **Introduction to Agents** (plan → act → observe → iterate)
3. **Client Libraries** (setup + calling models + multimodal basics)

🧠 **What we'll cover in Week 1 (high level)**

- Foundations of Generative AI
- LLMs & Prompting Fundamentals
- Agents: Concepts & Use Cases
- **Live build: Zapier E-commerce Customer Support Agent** (workflow + tool usage)

✅ **Quick reminder:** Please check your Uplevel schedule for the session link/timings and any updates.

If you face any setup issues, reach out early with a screenshot/error log—we're happy to help.

Looking forward to seeing you in the next session!

For any questions, concerns, or assistance regarding your live class schedule, classes not appearing on Uplevel, session links not working, or any other query apart from curriculum, please use the "Get Support" button on Uplevel to create a support ticket. Our operations team will assist you with it. Thanks!
